

How to update an A90/A100/A105?

A) Create the SD Card:

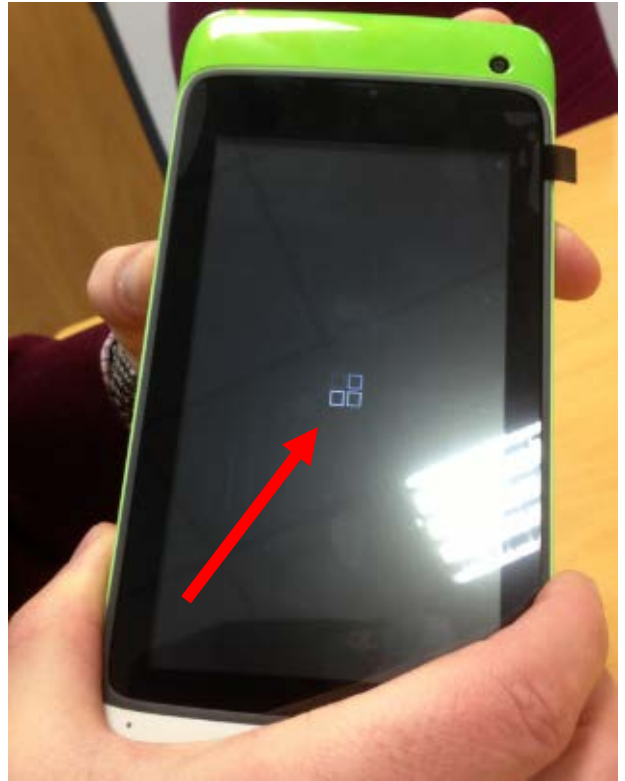

1. Extract the downloaded zip file and copy the sdfuse folder and its content on a microSD card

B) Update the device

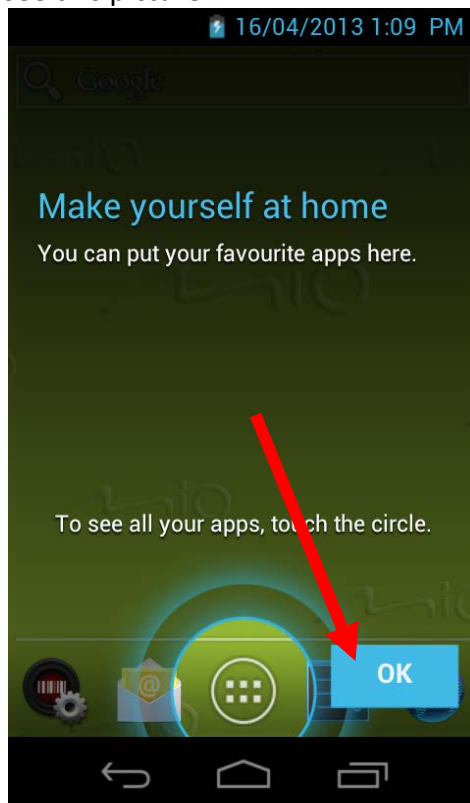

1. Insert the micro SD card prepared in A) and plug the power adapter on the device.
Note: Make sure you use the power adapter that was provided with your device; the device will not charge via a USB cable connected to a computer, and third party mains charger may not be powerful enough to charge it or even sustain the battery charge while the update is applied.

2. Hold the **Vol+** and **Power** buttons until you see 4 squares displayed

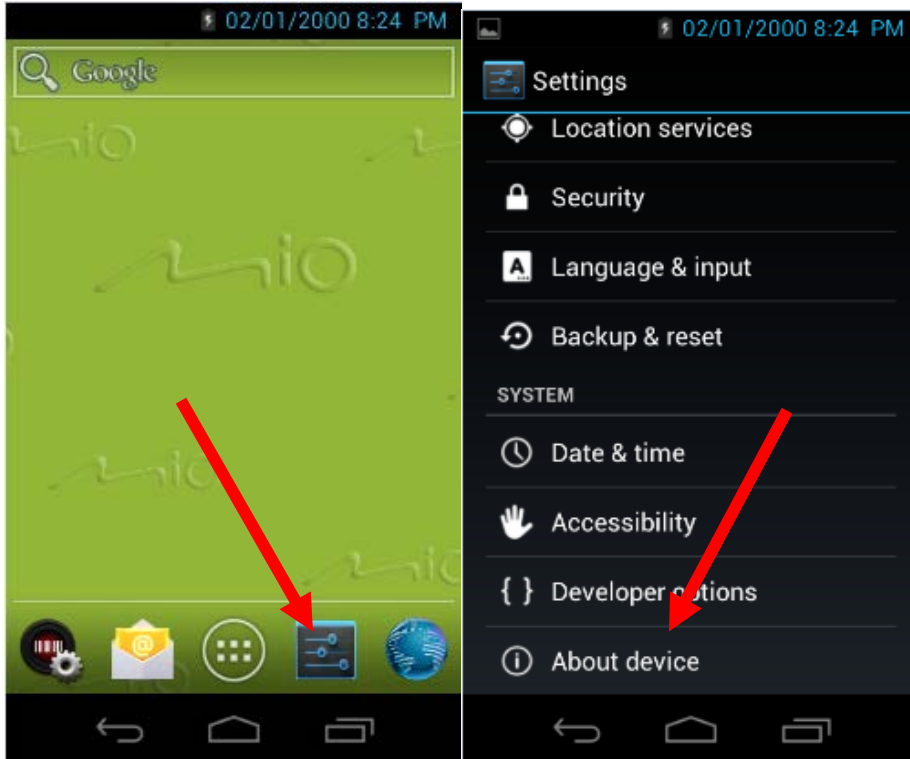

3. Release the buttons and wait until the update takes place. Once completed the device will restart itself. Press **OK** when you see this picture:

4. *Note:* Make sure the device has a minimum battery charge before trying to apply the update. We recommend a minimum of 30% charge to ensure the update gets installed successfully.

C) Check that the update was successful

1. Press the **Settings** button, slide to the bottom and press on **About device**

2. Make sure the Model and Build Number correspond to your device and the image version you're trying to install:
